***DETAILED ACTION***

1. This Office Action is the answer to the RCE (filed on 6/12/06).
2. Claims 1-3 are pending.

***Drawings***

3. The submitted formal drawings are accepted by the examiner.

***Allowable Subject Matter and Reason for Allowance***

4. Independent claims 1, and 2 are allowable over closest available prior art of Wang et al. (US Pat. 6,458,478) and Yamaguchi et al. (US Pat. 6,480,767) because these references do not teach an output control device directly controls the output current extracted from a fuel cell by means of an on/off action, comprising:

- a regenerative electric power calculating device which calculates the regenerative electric power which can be generated by regenerative operation of vehicle's propulsion motor; and a chargeable power calculating device to determine to restrict output current from said fuel cell to zero when said chargeable power is less than said regenerative electric power.

Yamaguchi et al. reference does not make obvious to one of ordinary skill in the art to cure the deficiency of Wang reference because it only teaches about regenerating electric power of the battery, while the claimed invention requires a device to calculate the regenerative power by vehicle's propulsion motor.

5. Claim 3 is allowable because it is dependent on allowed claim 2.

***Conclusion***

6. Claims 1-3 are patentable.

7. The submitted IDS (6/27/06) was considered; listed prior art have related subject matter to this pending application; however, they also do not disclose above allowance reason.
